THE GREEN DEAL – CONSEQUENCES FOR OFFSHORE WIND AND PROJECT CARGO

The world is gearing up to decarbonize and many large-scale sustainability projects ready to take effect. Wind energy is one of the most important energy sources to realise this change, with volumes expected to quadruple in the upcoming years. This presents both an enormous opportunity and challenge for the project cargo industry. That is why the

Project Cargo Summit online 2021 will focus on offshore wind energy.

The topics that will be discussed:

- Where are the parks being developed and what are the specific challenges?
- Consequences for ports, freight forwarders and shippers
- Is the supply chain ready?
